

COOP (ANP) RANGE CUBES 20%

Item number 234100

GUARANTEED ANALYSIS:

Crude Protein, (not less than)	20.00%
Crude Fat, (not less than)	2.00%
Crude Fiber, (not more than)	15.00%

INGREDIENTS:

Grain Products, Plant Protein Products, Processed Grain By-Products, Roughage Products, Forage Products, Calcium Carbonate, Roughage Products, Forage Products, molasses products, Dicalcium Phosphate, Magnesium Oxide, Salt, Vitamin A Supplement, Vitamin D3 Supplement, Vitamin E Supplement, Choline Chloride, Potassium Sulfate, Ferrous Sulfate, Copper Sulfate, Zinc Oxide, Maganous Oxide, and Sodium Selenite.

Manufactured By

ALABAMA FARMERS COOPERATIVE, INC.

Decatur, Alabama 35601

Feeding Directions:

COOP 20 % (ANP) Cube is an all-natural 20% protein product designed for producers who desire higher levels of protein without urea. These cubes are convenient to feed and fit well into almost any feeding program. These cubes can be fed on the ground in normal feeding situations to supply supplemental energy, and protein to your cattle. This product will supply energy and extra protein, in order to maintain proper digestion of below average forages. The extra protein, for microbes, will lead to increased fiber digestibility, therefore, giving cows more nutrients from their forage. This cube will also provide supplemental minerals and vitamins, but a free choice mineral is still recommended for optimum levels of mineral intake. Feed this cube at a rate of 3 to 5 pounds per head per day depending on the type forage available, stage of production, body condition and environmental conditions. This cube can be fed at lower levels, but it may not maintain desired body condition on your cattle. At lower feeding rates, you should watch for decreasing weight and adjust your feeding program accordingly. This cube also works well as a feed supplement to young growing heifers and bulls causing increased muscle and frame development without excess fat production. Do not feed free choice to any class of animal.

Important Management Practices

Provide a source of fresh clean water and free choice mineral at all times. Forage should be provided at all times. When making any change in an animals diet, plan a 7 to 10 day transition period. Do not allow feed to become wet and moldy. Poorly managed feeding programs can increase the possibility of feeding disorders.
