

COOP SALT MEAL MIX 3:1 VIT

Item number 233440

GUARANTEED ANALYSIS:

Crude Protein, (not less than)	13.00%
(This includes not more than 3% equivalent protein from non-protein nitrogen)	
Crude Fat, (not less than)	2.00%
Crude Fiber, (not more than)	10.00%

INGREDIENTS:

Grain Products, Processed Grain Byproducts, Roughage Products, Plant Protein Products, Forage Molasses Products, Salt, Urea, Calcium Carbonate, Dicalcium Phosphate, Dynamate, Vitamin A Supplement, Vitamin D Supplement, Vitamin E Supplement, Zinc Oxide, Magnesium Oxide, Ferrous Carbonate, Copper Oxide, Calcium Iodate, Cobalt Carbonate, Copper Sulfate, Zinc Sulfate, Magnous Oxide, Magnesium Sulfate, Potassium Chloride, and Sodium Selenite.

Manufactured By

Alabama Farmers Cooperative, INC.

Decatur, Alabama 35601

Feeding Directions:

This is a 13% self limiting feed in a textured meal form. This feed contains high levels of salt and will encourage intake of poor quality forages. This feed is also called a hot feed by some producers, the use of this feed in the fall increases intake of tough grass. This feed also contains supplemental protein, energy, and high levels of minerals and vitamins that will meet the needs of cattle when eating limited amounts of this feed. This feed also contains high enough levels of magnesium to prevent grass tetany when cattle or consuming consistent amounts of the product. This feed can be fed free choice and cattle will limit themselves on this product due to the salt level contained in the feed. Consumption should fall between 3 to 4 pounds per head per day. When feeding free choice, after a 2 week transition period, if consumption goes above 5 pounds per head per day, discontinue free choice feeding and hand feed 3 pounds per head per day. This feed must be fed in some type of feeder and should not be left uncovered and allowed to become wet. Also remember that salt is corrosive to metal, therefore consider this when purchasing feeders for this product. We do not recommend this feed for young growing animals. This feed contains urea as a percent of the protein and should not be fed to horses. Do not feed to sheep due to the copper level of the product. This feed can also be used as a winter feed supplement with your hay. Remove all salt from pasture when feeding this product. Remember that this feed will not increase the nutrient value of low quality forage, it will supplement this forage. As in the case of all salt limited feeds, intake during

extreme winter weather conditions may not provide all the supplemental energy required by the cow. During winter weather, discontinue use of this feed in body condition scores of cattle drop severely.

Important Management Practices:

Provide a source of fresh clean water and free choice minerals at all times. When making changes to an animals diet, expect a 7 to 10 day transition period for the animals. Do not allow feed to become wet or moldy. When feeding as a hay supplement, provide bunk feeders to reduce waste. Always provide free choice hay or other forage when feeding this product. Poorly managed feeding programs can increase the possibility of digestive disorders. If you have any questions concerning feeding programs, please contact an Animal Nutritionist.
