

# TEVACO RANGE CUBES 20% with MAGNESIUM

Item number 234200

## GUARANTEED ANALYSIS:

Crude Protein, (not less than) (includes not more than 6.66 equivalent crude protein from non-protein nitrogen)	20.00%
Crude Fat, (not less than)	2.00%
Crude Fiber, (not more than)	15.00%

## INGREDIENTS:

Grain Products, Plant Protein Products, Processed Grain By-Products, Calcium Carbonate, Roughage Products, Forage Products, molasses products, Dicalcium Phosphate, Magnesium Oxide, Salt, Vitamin A Supplement, Vitamin D3 Supplement, Vitamin E Supplement, Choline Chloride, Potassium Sulfate, Ferrous Sulfate, Copper Sulfate, Zinc Oxide, Manganous Oxide, and Sodium Selenite.

Manufactured By

ALABAMA FARMERS COOPERATIVE, INC

Decatur, Alabama 35601

## Feeding Directions:

Tevaco 20% Range Cube with Magnesium is very convenient to feed and will fit well in almost any feeding situation where grass tetney is a concern. These cubes can be fed on the ground in normal feeding situations to supply needed energy, and protein to your cattle. Tevaco 20% with Magnesium will also supply extra levels of magnesium to aid in the prevention of grass tetney. Grass Tetney is a nutritional disorder occurring in the spring and fall, associated with early season lush green forages. Signs of grass tetney is loss of balance, increased salivation and death in severe cases. The use of this product as the sole prevention of grass tetney is not recommended due to inconsistent intake of magnesium. Free Choice High Magnesium (magnesium level of >10%) Mineral is also recommended for your cattle during grass tetney season. This cube will also provide supplemental minerals and vitamins, but a free choice mineral is still recommended for optimum levels of mineral intake. This cube will also help maintain proper forage digestibility, giving your cattle more nutrients from what she eats. Feed the cube at a rate of 4 to 6 pounds per head per day depending on the type forage available, stage of production, body condition and environmental conditions. This cube can be fed at lower levels, but it may not maintain desired body condition on your cattle, nor will it supply sufficient amounts of magnesium. At lower feeding rates, you should watch for decreasing weight and adjust your feeding program accordingly. Do not feed range cubes free choice to any class of animal. This cube contains urea and should not be fed to horses. Accidental intake of small amounts of urea by horses should not cause digestive disorders to the animal.

## Important Management Practices:

Provide a source of fresh clean water and free choice mineral at all times. Forage should be provided at all times. When making any change in an animal's diet, plan a 7 to 10 day transition period. Do not allow

feed to become wet and moldy. Poorly managed feeding programs can increase the possibility of feeding disorders.
