Premium Equine Feed

HORIZON™

PREMIUM EQUINE FEED

FEED PRODUCTS

Excel

A complete horse feed line designed for producers who prefer a sweet textured horse feed. Excel is designed for working and pasture horses consuming average to good quality forages.

Champions Choice

A complete horse feed line designed for producers who prefer a pelleted horse feed. Champions Choice offers a variety of feeds to meet a range feeding situations. It also provides a 32% concentrate for producers who prefer to mix feed at the farm.

Mare & Foal

A complete horse feed line designed and formulated to meet the nutritional needs of mares and foals. It provides needed protein, energy, mineral and vitamins in a sweet textured form to encourage feed intake.

All-Grain

This feed is designed for producers who prefer an All-Grain Horse Feed. It is designed to provide supplemental protein and energy, but does not offer additional mineral and vitamins to the horse. Producers must provide a mineral/vitamin supplement when using this feed.

Senior

This is designed for producers who desire a horse feed specifically designed to meet the nutritional needs of the senior horse. It is highly palatable to encourage intake and proper digestion. This feed may be softened with water for the dentally impaired.

Mineral/Vitamin Supplement

A complete mineral and vitamin supplement to be fed with Horizon Equine Feed for improved hoof and health performance.

Equine Tub

A protein, energy, vitamin and mineral supplement block designed to increase forage utilization and enhance digestive function. Excellent for broodmares or senior animals.

FEEDING CONSIDERATIONS

Feeding is a very important consideration for a horse owner, both from the standpoint of meeting the nutritional requirements of the animal and reducing expense. A good feeding program will allow your horse to reach its genetic potential to perform at its highest level. Horses have requirements for a balanced feeding program based upon the following considerations:

Forage

The horse's digestive system is designed to utilize forage as the major component of its diet. The rest of your feeding program will be based upon the amount and quality of forage provided to your horse. The amount of forage in its daily diet should be at least 1.5% of its total body weight.

Concentrates:

Feeding forage alone cannot meet the total nutrient requirements for your horse. Concentrates will be needed to supplement its diet. They will provide additional protein, fats, starches, minerals and vitamins to prevent shortages in your forages.

Water:

Fresh water is a vital part of the nutrient requirements of your horse. Horses can require up to 20 gallons of water per day and will be based upon environmental temperature, activity level, amount of water from forage and feed, and quality and temperature of the water.

Minerals and Vitamins:

Minerals and vitamins are also very important in the diet of horses. A complete mineral and vitamin supplement providing minerals such as calcium; phosphorus; sodium; chloride; magnesium; potassium; sulfur; iron; selenium; copper; zinc; vitamins A, D and E; and B vitamins such as biotin, thiamine and riboflavin. Minerals and vitamins are essential for skeletal and teeth formation, muscle recovery, reproductive performance, immunity and growth. Neither trace mineral salt blocks or white salt blocks will meet the requirements for these nutrients.

Nutrition

Proper nutrition is the key to optimum performance of your horses. Without proper nutrition, equines will not meet or exceed their potential. Horizon™ Premium Equine Feeds use high-quality protein, energy, vitamins and minerals to meet its daily nutrient requirements. These feeds are formulated to provide a safe, consistent and nutrient-dense supplement to maximize the performance of your animals on Southeastern forages.

Mintrex® Chelated Mineral Technology

All Horizon™ Premium Equine Feeds contain Mintrex® Chelated Mineral Technology. Mintrex chelated trace minerals use an organic methionine-based bond to increase absorption of trace minerals. Increased trace minerals improve performance and health of your horse.

Steam Flaked Corn

Some Horizon™ Premium Equine Feeds contain steam-flaked corn. The steam-flaked process consistently increases the digestibility and energy level of the feed over other forms of processing.

GHP2™

GHP2™ is a proprietary blend of products designed to provide animals with nutrition to address the every day challenges they face and improve the overall profitability of your business. GHP2™ is a unique blend of ingredients shown to:

- Supports gut health
- Supports a healthy immune system
- Aids with pathogen inhibition
- Helps deal with mycotoxin challenges

Key Points

The addition of GHP2™ to rations will result in optimal digestibility and feed efficiency, as well as a strong immune system during times of stress.

Improvements in milk quality and production, combined with enhanced reproductive performance and overall health.
