

Formax Minerals

Formax Mineral and Vitamin supplements are formulated by and manufactured for Alabama Farmers Cooperative specifically for southeastern cattle consuming southeastern forages. Forages in the southeast are unique in their nutrient composition. Therefore, a vitamin and mineral program formulated for southeastern forages will better meet the unique needs of your livestock. Formax Minerals offer a full line of breeding, grazing, medicated and speciality minerals for your operation. When using Formax Minerals, you can be assured of a product formulated and manufactured in a way to provide a palatable, consistent product at a economical price to meet the daily needs of your livestock. Formax minerals should be provided free choice at all times and mineral feeders should not be located more than one-half mile apart. Mineral feeders should be located near water tanks, loafing areas, and areas of best grazing. When feeding Formax Minerals, daily consumption should average 4 ounces per day over a feeding period.

The Formax Line-up

Grazing Minerals: Designed to be offered to cattle when they are susceptible to grass tetney. Grazing minerals should only be fed during times of grass tetney concerns. These minerals are recommended to be offered free choice to cattle at least 28 days prior to grazing lush forages. Grazing minerals consist of a bronze, silver, or gold formulation each designed to meet the magnesium requirements of cattle during grass tetney season

Breeding Minerals: Designed to be offered to cattle free choice during times of the year when grass tetney is not a concern. Formax Breeding Minerals have taken into account the unique requirements a cow has to return to estrus and rebred in a timely fashion after calving. Formax Breeding Minerals also contain the prenatal minerals and vitamins required for the fetus to properly develop and have a strong immune system at birth.

All Purpose: Formax 24/7 mineral is formulated to be fed year around. When offered free choice on a continuous and consistent basis, it will meet the needs of your cattle including breeding season and times when grass tetney is a concern.

Specialty: These minerals are formulated and manufactured for unique situations in livestock. The specialty minerals consist of products for fly control and medicated products for both sickness and feed efficiency.

Horse and Goat Minerals: Formax Minerals include two products specifically designed to meet the requirements of both goats and horses.
