

CO-OP YELLOW CORN CHOPS

ITEM NUMBER 270120

GUARANTEED ANALYSIS

CRUDE PROTEIN, not less than	7.50%
CRUDE FAT, not less than	3.00%
CRUDE FIBER, not more than	3.50%

Ingredients:

Cracked Yellow Corn

Manufactured By

ALABAMA FARMERS COOPERATIVE, INC.

Decatur, Alabama 35601

FEEDING DIRECTIONS

Corn Chops are used to provide supplemental energy to the diets of birds. Grains are very important to the diets of birds due to the energy contained in the grain. Corn is the most important grain used in the diets of birds, due to the efficiency of the nutrients in the kernel. Corn also contains a percentage of Xanthophylls which is essential in the development of a yellow egg yolk, and the deep yellow color of the beak. This feed is ideal to feed to non laying mature hens that have free roam and can find other protein supplements along with minerals and vitamins. Corn Chops also works well when supplementing male birds. Corn Chops are often mixed with other ingredients to provide a complete diet for chickens. This feed should not be fed alone as a grower ration or a laying ration. This feed should only be used as a supplemental energy source to the diets of birds. This feed contains no added minerals or vitamins and these should be provided to caged birds. This feed is also used as a supplement for wild birds during winter feeding times.

Important Management Practices

Always provide a source of fresh clean water at all times, allow plenty of space for birds to reduce incidence of disease and poor production. Contact an animal nutritionist if you experience prolonged conditions such as weak egg shells, loss of feathers, inability to walk, or blindness. These could all be signs of an improper feeding program.
