Feeding Directions:

Hog Grower Pellets 14/ W TYL. is a complete pelleted feed finishing pigs. This high energy feed will sustain high levels growth and muscle development without excess fat production. This feed contains proper levels of the amino acid Lysine, which most limits growth when deficient in the diet. This feed

also contains proper levels of calcium and phosphorous to prevent bone and structure problems in finishing swine. This feed also has been supplemented with the B vitamins that they require on a daily basis. This feed should be offered free choice to pigs weighing from 70 pounds to 160 pounds. At 160 pounds, pigs should be placed on Hog Finisher 12%. Do not feed this feed to any other class of swine. Do not feed to any other class of livestock. This feed can be fed up until slaughter.

Important Management Practices:

Do not allow feed to become wet or moldy. Feeding this product in ways other than directed can lead to nutritional disorders. Allow a 5 to 7 day transition period when changing feeds. For further ration changes, you should contact an Animal Nutritionist.
